CSCD 240
Lab 15

SPECIFICATIONS

- I have provided an **<u>unchangeable</u>** cscd240Lab15.c file. Your task is to write the functions.
- You will need to create a structure named Stock.
- The Stock structure will only contain
  - char symbol[10];
  - char companyName[100];
  - double currentPrice;

- The menu portion will contain:
  1) Print the array sorted by symbol
  2) Print the array sorted by company name
  3) Print the array sorted by current price
  4) Quit

- You must verify range of the menu.
- The input will come from a file, name entered by the user. You must ensure the file opens. You must use your fileUtil.h and fileUtil.c just drop them into the utils folder
- There is nothing tricky here, no hidden agenda, just trying to get you to work with structures.
- You must write your own sort, you can't use qsort or any built in sort.

FILE STRUCTURE
symbol
company name
current price

TO TURN IN
Submit a zip file
- Containing your C files and H file(s)
- My Makefile
- Your input file(s)
- Include an output captures from running your program named cscd240lab15output.txt.
- NOTE: nothing dynamic here so no valgrind

Your zip will be named your last name first letter of your first name lab15.zip (Example: steinerslab15.zip)
